

STEEL

PERFECTING THE BASICS

With a seasoned team and specialized equipment, we excel in transporting steel commodities on flatbed trailers, ensuring secure, efficient, and reliable delivery for your steel-related needs.

PGT SERVICES BY THE NUMBERS

With expertise in hauling steel, we have moved over 12,000+ steel commodity loads across the United States in the last year.

WE HAVE STEEL COVERED!

PGT Services excels in steel, offering comprehensive capabilities for transporting a wide range of steel products. With access to specialized flatbed capacity and a skilled team, we ensure efficient transportation of steel coils, beams, sheets, and more. Our commitment to security and reliability makes us a trusted partner in the steel industry, delivering your steel commodities on time and in optimal condition!

COMMODITIES

These steel products are transported on flatbed trucks due to their size, weight, and the need for specialized securing methods.

Structural Steel

This category includes steel beams, columns, and other structural components used in construction projects. These items are often large and heavy, making flatbed transportation the preferred method.

Coiled Steel

These coils are used in various industries and can come in many forms. Coils can be heavy and require secure strapping or blocking during transportation, making flatbeds an appropriate choice.

Steel Sheets and Plates

Steel sheets and plates come in various sizes and thicknesses and are used in manufacturing, fabrication, and construction. Flatbeds are suitable for transporting these flat and heavy steel products.
