

STEEL AND PIPE

PGT Services is a premier transportation partner with over 40 years of expertise in the flatbed industry, specializing in the safe and efficient transportation of pipe and steel commodities across North America. Our commitment to safety, reliability, and execution is backed by a network of qualified, safety-certified carriers. We deliver excellence in every load, ensuring your goods arrive securely and on schedule, every time.

Pipe Transportation Expertise

PGT Services is a leader in pipe transportation, having successfully moved over 2,000 pipe loads across the US in the past year alone. We offer specialized equipment and a dedicated team to ensure secure deliveries of various pipe commodities, including PVC, structural, conduit, cast iron, galvanized steel, tubing, and materials for Oil & Gas projects. Our capabilities span construction, industrial, and plumbing applications, delivering on-time and with utmost care.

Steel Transportation Excellence

In steel transportation, PGT Services has moved over 12,000 steel commodity loads across the United States in the last year. Our specialized flatbed capacity and experienced team enable us to transport a wide range of steel products such as coils, beams, sheets, and plates. Whether for manufacturing, fabrication, or construction, our focus remains on secure, efficient, and reliable delivery.

PIPE COMMODITIES

PVC

We move PVC pipes into sites for construction, plumbing and drainage, irrigation water distribution and electrical installation projects!

Steel Pipe

Steel pipes play crucial roles across various sectors. In construction, they offer structural support for buildings and bridges, while in transportation, they enable fluid and gas transport.

Specialty, Drainage, Oil & Gas

Customized pipes for unique applications, drainage pipes managing stormwater and sewage, and oil & gas pipes facilitating drilling, transport, and distribution in the energy sector.

SPECIALIZED STEEL COMMODITIES

Structural Steel

This category includes steel beams, columns, and other structural components used in construction projects. These items are often large and heavy, making flatbed transportation the preferred method.

Coiled Steel

These coils are used in various industries and can come in many forms. Coils can be heavy and require secure strapping or blocking during transportation, making flatbeds an appropriate choice.

Steel Sheets and Plates

Steel sheets and plates come in various sizes and thicknesses and are used in manufacturing, fabrication, and construction. Flatbeds are suitable for transporting these flat and heavy steel products.
